TANNER TOOL (DIGITAL VLSI) COURSE STRUCTURE

Tanner Tools is a software suite for the design, layout and verification of analog, mixed-signal, RF and MEMS ICs. It is an efficient path from design capture through verification. T-Spice Pro helps integrate your design flow from schematic capture through simulation and waveform viewing. L-Edit Pro is a comprehensive physical layout and verification system that accelerates design cycles. It is ideal for applications including Power Management, Life Sciences / Biomedical, Displays, Image Sensors, Automotive, Aerospace, RF, Photovoltaic, Consumer Electronics and MEMS.

Tanner
EDA

Tanner tool is a Spice Computer Analysis Programmed for Analogue Integrated Circuits. Tanner tool consists of the following Engine Machines: S-EDIT (Schematic Edit), T-EDIT (Simulation Edit), W-EDIT (Waveforms Edit), L-EDIT (Layout Edit)

Using these engine tools, spice program provides facility to the use to design & simulate new ideas in Analogue Integrated Circuits before going to the time consuming & costly process of chip fabrication
